\* Result of a scientific study by P. Pronk for Prev Chronic Dis. 2012

## A table that is more than convincing.

As a member of the CREW family, our T-model fits seamlessly into the success story of its series siblings. Unbeatable value for money, a wide range of extension and mounting options and a modern, clear, symmetrical design make **CREW T** an indispensable work tool in the office. In addition, **CREW T** sets new standards in every home office with its available compact dimensions (width from 800 mm), the working height that can be adjusted quickly at the touch of a button at a speed of 50 mm/s between 650-1300 mm and the countless colour and decor variants. Work without compromise. No matter whether in the office or at home.

### Why you should work at height-adjustable desks:

- Quick change between sitting and standing activity at the touch of a button
- The table height can be individually adjusted to the body height
- Demonstrably less fatigue at work
- Better performance
- Working in a standing position trains the back and leg muscles
- Movement relieves the spinal column and the circulation is activated

# Fast, quiet, strong and safe. CREW T means working from top to bottom at the highest level.

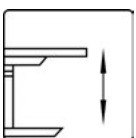

Nothing is more stressful at work than noise. With a pleasant noise level of maximum 40 dB when driving up and down, **CREW T** is super quiet and with a TÜV-tested 85 kilo payload, a real powerhouse on slim legs. Conveniently the slim legs can be folded up quickly and easily for transport or storage as required. It couldn't be more practical. And it couldn't be safer. Because thanks to its production in Germany, standard Easy-Stop sensor, absolute stability and top quality parts, **CREW T** also provides the highest level of safety for the user. Confirmed by the GS symbol.

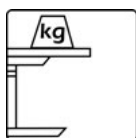

## Important features of the new CREW T desk system:

- T-leg frame with compact rectangular columns of 90 x 60 mm in straight-line, symmetrical design
- Electrically height adjustable from 650-1300 mm, double telescope, bottom-up
- Rectangular table optionally with 25 mm chipboard or 19 mm MDF board
- Widths: 800-2000 mm, depths: 800-1000 mm (special dimensions on request)
- Collision protection through Easy-Stop sensor
- Synchronous start-up of both motors
- Load capacity up to 85 kg possible
- Running speed of 50 mm/s
- Noise level  $\leq 40$  dB
- Power consumption in standby  $< 0,3$  W/h
- A product with tested safety
- High quality and processing
- Production in Germany
- Large variety of colours and decors
- Expandable with accessories for electrification and attachments
- Standard fold-down side panels from 1600 mm table width for space-saving storage and transport

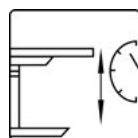

### Technical data:

Adjustment range  
650-1300 mm
